

Senior Healthcare Special!! 20% OFF SENIOR PET HEALTH CARE

Senior healthcare is all about prevention; about finding small problems before they become serious ones. Early detection can save you money and heartache down the road. For example, slight elevations in kidney enzymes may not be a big deal- yet. Those values give us indications of how your pet's organs are functioning. While loss of kidney function is not reversible, there are interventions that may be applied with early organ disease that can slow degeneration down. However, if we wait until outward signs of kidney disease are observed, your pet may have already lost 75% of its kidney function.

During September, Mission Viejo Veterinary Hospital will be running several specials to spotlight senior healthcare. All senior pets (7 and older) will receive a 20% discount on everything. This includes exams, vaccines, blood work, dental cleanings, medications, X-rays and more! Additionally, this month, with an office visit, senior cats will receive a free blood pressure reading. Blood pressure readings screen for possible hyperthyroidism and kidney disease in cats. **And with an office visit, senior dogs will receive a free (5 pound) bag of Science Diet Senior Food** (small bites or regular).
